## Exam Questions 1Z0-441

Oracle Mobile Development 2015 Essentials

<https://certificationtime.com/>

---

### Question 1

---

Your customer currently builds native Android applications. He is intrigued by the cross-platform capabilities of Oracle MAF, but fears that distribution through the Apple App Store is complex to set up and expensive.

Considering that your customer wants to distribute his applications to the general public and out of his or her own organization, which three explanations can you provide about the Apple App Store to appease your customer's fears?

- A. Apple offers subscriptions to its Xcode development tools. It is possible to publish to the App Store for free with an active subscription.
- B. Apple provides the iOS provisioning profile and certificate you need to sign the application, but you do not need to use Apple's tools directly to package your MAF application since JDeveloper and ODE will do the work for you if properly configured.
- C. Publishing MAF applications to the App Store is very simple because you submit them to Oracle and not to Apple.
- D. If you plan to sell your applications instead of providing them for free, you need to enroll in the iOS Developer Enterprise program.
- E. To publish to the App Store as an individual, only membership in the entry-level iOS Developer Program is required. Apple asks for an annual membership fee. There is no need to enroll in the iOS Developer Enterprise Program.
- F. Oracle has published numerous MAF applications to the Apple App Store without any problems and will update the MAF framework if Apple's submission requirements are changed.

---

**Answers B, E, F**

---

---

### Question 2

---

Which two statements about using HTTPS to secure access to a mobile service are true?

- A. HTTPS is immune to attacks.
- B. HTTPS secures only the transport to the service.
- C. HTTPS can be used for data redaction.
- D. HTTPS alone is insufficient for services that require user-level authentication.

---

**Answers B, D**

---

---

### Question 3

---

If you want to create your own custom Springboard rather than use the out-of-the-box one, which two artifacts would you need to create?

- A. unobscured task flow

- B. feature
- C. AMX page
- D. menu items
- E. side bar

**Answer A, E**

---

---

---

### Question 4

---

What two features are common for unbounded task flows and bounded task flows in MAF?

- A. define managed beans
- B. support task flow input and output parameters
- C. support task flow return calls
- D. basis for an MAF feature
- E. define control flow cases between activities

**Answer D, E**

---

---

Explanation:

A MAF AMX page can be referenced in both bounded and unbounded task flows, in which case actions/interactions from both task flows are included in the Action selection list.

---

### Question 5

---

Which three statements are true about MAF data controllers?

- A. A data controller is an adapter that exposes a simpler, unified development API for MAF application developers to declaratively and programmatically access data services.
- B. Data controllers expose data service structures in the data controller panel. The information exposed includes attributes, collections, and public methods.
- C. Data controllers in MAF exist for remote SOAP and REST services only and handle all of the XML to Java object marshalling and unmarshalling.
- D. Data controllers are configured in one or more DataControllers.dcx files.
- E. MAF is restricted to two data controllers per mobile application.

**Answer B, C, D**

---

---

---

### Question 6

---

After importing a Feature Archive into an application, what else must you do to include its features into your application?

- A. Create a new deployment profile.
- B. Add a ligio URL.
- C. Add a task flow.

D. Add the in-middleware feature references.

---

### Answer D

---

Reference:

<https://dics.oracle.com/middleware:maf210:mobile:delip-maf:maf-apps-get-started.htm#ADFMF22>

---

### Question 7

---

Which two approaches are encompassed by service mediation?

- A. loosely coupling service consumers with enterprise systems
- B. the ability to provide additional information by aggregating data from multiple enterprise systems
- C. rapid prototyping of service interfaces
- D. rapid deployment of services into the cloud

---

**Answer B, C**

---

---

### Question 8

---

Which step would you perform to declaratively bind data collections and attributes, saved in a local SQLite database, to the AMX user interface components?

- A. Configure the SQLite database data control and use the data controls panel to drag and drop data collections and attributes into the AMX view.
- B. Use a JavaBean to wrap calls to the SQLite database and create a JavaBean Data Control from it, that then appears in the data controls panel.
- C. Use the REST service adapter to query data from SQLite in JSON format.
- D. Create a TopLink persistence layer to query and update the database. The AMX user interface components bind to the EJB session facade.

---

**Answer B**

---

---

### Question 9

---

You and your colleague develop different parts of the same MAF application. He recently joined the company and needs to set up his workstation and devices for debugging. The application needs to be tested on Apple iPads and various Android-powered tablets. Your colleague has been assigned as an Apple Mac OS X user as his workstation.

Which three tasks must you perform to ensure that your colleague will be able to debug the

application on iOS and Android devices?

- A. Make sure that the network device access option is enabled in the maf-application.xml file.
- B. Obtain a debug signing certificate from the Google Play store developer support.
- C. Check that the settings in the Manifest file match those in the manifest file.
- D. Register any Apple device intended to test and debug under the appropriate Apple Developer account.
- E. Disable USB debugging on all the Android devices intended because this will interfere the IDE's debugger.
- F. Establish a Bluetooth link between your colleague's workstation and the devices.

**Answers A, C, D**

Reference:

<http://docs.oracle.com/middleware/mibile201/mibile/develop/maf-debug-test.htm>

### Question 10

You are building a new MAF application and the design document specifies the following requirements about the application logs:

- 1. Log entries by the MAF framework must be kept at a minimum.
- 2. Log entries generated by your own business logic must be as detailed as possible for compliance purposes.

The logging.properties file for your application currently looks like this:

```
handlers=com.sun.util.logging.ConsoleHandler
formatter=com.sun.util.logging.SimpleFormatter
oracle.adfmf.util.logging.ConsoleHandler.level=SEVERE
oracle.adfmf.util.logging.ConsoleHandler.formatter=oracle.adfmf.util.logging.PateroFormatter
oracle.adfmf.util.logging.PateroFormatter.patero=oracle.LOGGER - rCLASSr -
rMETHODr]rMESSAGER
oracle.adfmf.application.useParentHandlers=false
oracle.adfmf.application.handlers=oracle.adfmf.util.logging.ConsoleHandler
oracle.adfmf.application.level=INFO
oracle.adfmf.framework.useParentHandlers=false
oracle.adfmf.framework.handlers=oracle.adfmf.util.logging.ConsoleHandler
oracle.adfmf.framework.level=FINE
```

Which two actions would you perform to fulfill the requirements?

- A. Use loggers from the com.sun.logging package in your code.
- B. Set oracle.adfmf.application.level to FULL in the logging.properties file.
- C. Set handlers to oracle.adfmf.util.logging.ConsoleHandler in the logging.properties file to store the logs in a database since this is required by regulations.
- D. Set oracle.adfmf.application.level to FINEST in the logging.properties file.
- E. Set oracle.adfmf.framework.level to SEVERE in the logging.properties file.
