CERTIFICATIONSTIME

QUESTION 1

Your team needs to make sure that a Compute Engine instance does not have access to the internet or to any

Google APIs or services.

Which two settings must remain disabled to meet these requirements? (Choose two.)

- A. Public IP
- B. IP Forwarding
- C. Private Google Access
- D. Static routes
- E. IAM Network User Role

Correct Answer: C,D

Explanation/Reference:

Reference: <https://cloud.google.com/vpc/docs/configure-private-google-access>

QUESTION 2

Your company runs a website that will store PII on Google Cloud Platform. To comply with data privacy regulations, this data can only be stored for a specific amount of time and must be fully deleted after this

specific period. Data that has not yet reached the time period should not be deleted. You want to automate the

process of complying with this regulation.

What should you do?

- A. Store the data in a single Persistent Disk, and delete the disk at expiration time.
- B. Store the data in a single BigQuery table and set the appropriate table expiration time.
- C. Store the data in a single Cloud Storage bucket and configure the bucket's Time to Live.
- D. Store the data in a single BigTable table and set an expiration time on the column families.

Correct Answer: B

QUESTION 3

A customer is running an analytics workload on Google Cloud Platform (GCP) where Compute Engine instances are accessing data stored on Cloud Storage. Your team wants to make sure that this workload will not be able to access, or be accessed from, the internet.

Which two strategies should your team use to meet these requirements? (Choose two.)

- A. Configure Private Google Access on the Compute Engine subnet
- B. Avoid assigning public IP addresses to the Compute Engine cluster.
- C. Make sure that the Compute Engine cluster is running on a separate subnet.
- D. Turn off IP forwarding on the Compute Engine instances in the cluster.
- E. Configure a Cloud NAT gateway.

Correct Answer: B,E

QUESTION 4

Your company is using GSuite and has developed an application meant for internal usage on Google App Engine. You need to make sure that an external user cannot gain access to the application even when an employee's password has been compromised. What should you do?

- A. Enforce 2-factor authentication in GSuite for all users
- B. Configure Cloud Identity-Aware Proxy for the App Engine Application.
- C. Provision user passwords using GSuite Password Sync.
- D. Configure Cloud VPN between your private network and GCP.

Correct Answer: D

QUESTION 5

An organization receives an increasing number of phishing emails. Which method should be used to protect employee credentials in this situation?

- A. Multifactor Authentication
- B. A strict password policy
- C. Captcha on login pages
- D. Encrypted emails

Correct Answer: D

QUESTION 6

A DevOps team will create a new container to run on Google Kubernetes Engine. As the application will be

internet-facing, they want to minimize the attack surface of the container. What should they do?

- A. Use Cloud Build to build the container images.
- B. Build small containers using small base images.
- C. Delete non-used versions from Container Registry.
- D. Use a Continuous Delivery tool to deploy the application.

Correct Answer: D

Explanation/Reference:

Reference: <https://cloud.google.com/solutions/best-practices-for-building-containers>

QUESTION 7

Which international compliance standard provides guidelines for information security controls applicable to the provision and use of cloud services?

- A. ISO 27001
- B. ISO 27002
- C. ISO 27017
- D. ISO 27018

Correct Answer: C

Explanation/Reference:

Create a new Service Account that should be able to list the Compute Engine instances in the project. You want to follow Google-recommended practices.

QUESTION 8

A customer deployed an application on Compute Engine that takes advantage of the elastic nature of cloud computing.

How can you work with Infrastructure Operations Engineers to best ensure that Windows Compute Engine VMs are up to date with all the latest OS patches?

Welcome to download the Newest CertificationsTime Professional-Cloud-Security-Engineer dumps
<https://certificationstime.com/updated/professional-cloud-security-engineer-exam-dumps-pdf/>

- A. Build new base images when patches are available, and use a CI/CD pipeline to rebuild VMs, deploying incrementally.
- B. Federate a Domain Controller into Compute Engine, and roll out weekly patches via Group Policy Object.
- C. Use Deployment Manager to provision updated VMs into new serving Instance Groups (IGs).
- D. Reboot all VMs during the weekly maintenance window and allow the StartUp Script to download the latest patches from the internet.

Correct Answer: D

QUESTION 9

A manager wants to start retaining security event logs for 2 years while minimizing costs. You write a filter to select the appropriate log entries. Where should you export the logs?

- A. BigQuery datasets
- B. Cloud Storage buckets
- C. StackDriver logging
- D. Cloud Pub/Sub topics

Correct Answer: C

Explanation/Reference:

Reference: <https://cloud.google.com/logging/docs/exclusions>
